

Terra Films

Dear Customers,

Jet Technologies would like to confirm that there have been no changes to the manufacturing process of our BOPP films, ensuring the same consistent quality and performance our customers rely on.

We are pleased to advise that our Terra BOPP laminate is now ISCC+ certified and incorporates 30% recycled content sourced from post-industrial materials. This certification supports our ongoing commitment to sustainability while maintaining the trusted production methods that have delivered reliable results for many years.

This development also aligns with broader industry sustainability initiatives, including targets set by Australian Packaging Covenant Organisation to achieve 30% recycled content in plastic packaging by 2025.

In short, the product and manufacturing process remain unchanged, but Terra is now officially certified to contain recycled content through the ISCC+ mass balance system, further strengthening our sustainable product offering.

If you would like any further information, please feel free to reach out to our team.

Regards,

Kane Mangan
